Business Edge lands two major industry awards for pioneering consultancy and technology

Business Edge, the specialist training, trouble-shooting and technology company, has won two national industry Awards for excellence.

The Hampshire-based company, headed by Mike Creamer, won the prestigious Consultant of the Year Award for its wide ranging technical and trouble-shooting services to industry in the ACR News Awards, held at the National Motorcycle Museum, in Birmingham.

In a double win, it also shared the honours in the top Refrigeration Product of the Year category, awarded to ClimaCheck, the pioneering Scandinavian-designed system performance monitoring tool, which it distributes in the UK.

Mike Creamer, managing director of Business Edge Ltd, said: "We are delighted to have been recognised in these important national Awards. The Business Edge team is second to none in terms of commitment and professionalism. These Awards reflect the brilliant team work and collective expertise we have built up over two decades. I am proud of the team and what we deliver for our clients."

The judges commended Business Edge and Mike Creamer for their wide ranging contribution, which includes expert witness work in complex legal cases, consultancy, R&D projects, work with leading international manufacturers, and on-site plant performance evaluation and remedial works.

It also recognised Mike's prolific personal contribution to the industry's training scene, including the publication of hundreds of technical articles in industry journals.

The Award for ClimaCheck as Refrigeration Product of the Year follows its exclusive launch by Business Edge in the UK. The company has championed the technology to major end users and contractors, holding well-attended technical briefings and demonstrations at its headquarters in Waterlooville, Hampshire.

The technology is unique in providing instantaneous read-out of capacity, efficiency, COP and precise performance characteristics of any type of AC&R systems working on any refrigerant. It is now being used by some of the biggest names in UK industry to monitor plant, diagnose system faults, optimise energy consumption and detect refrigerant loss through leakage.

“It's a stunning product, and exactly what the industry has been waiting for. We had no hesitation in investing our energies in promoting ClimaCheck within the UK market. With further developments in the pipeline, I have no doubt that – as on the continent – ClimaCheck will become standard issue performance analyser for switched-on field service engineers, consultants and energy performance inspectors.”
